

# Advantage FAQ

---

**Question**

Can I mix System 500 GPS with GPS1200?

---

**Answer**

Yes, System 500 and System 1200 GPS are fully compatible. RTK base stations and rovers from System 500 and System 1200 can be used together. The most advantageous combination is to use System 500 as the base station and benefit from the many new features of System 1200 at the rover. For post-processing applications, LGO (LEICA Geo Office) software supports all Leica GPS receivers (System 200, 300, 500 & 1200) as well as the industry standard RINEX format. An example of X-function extending beyond System 1200.
