

## System 1200 FAQ

February, 2006

### System 1200

## Can I use non-Leica recommended compact flash cards with my System 1200 Instruments?

---

#### *Background*

System 1200 instruments use Compact Flash (CF) cards as their primary storage medium. All measurement data collected with System 1200 instruments is stored on the CF card. Although internal memory is an option, most users elect to use CF cards.

Leica's product developers thoroughly investigated and evaluated most CF cards available on the market today. CF cards supplied by Leica are optimized to meet the requirements of Leica instruments, ensuring the highest reliability, robustness, and compatibility.

Using a non-Leica approved CF card is putting your hard work and data in serious jeopardy. There will be no benefit from using a non-Leica approved CF card if, at the end of the day, all of your data is lost.

---

#### *Answer*

We strongly recommend that you do not use non-Leica recommended memory cards. You are taking a huge risk not using Leica approved memory cards. Leica will not support any data-related issues where a non-Leica approved memory card was used. To learn more, follow this link to read Accessory Newsletter 3 on Data Storage and Transfer:
