

Advantage FAQ

Question

What is SmartCheck?

Answer

SmartCheck describes the new processing algorithms that translate the measurement delivered from the SmartTrack measurement engine to coordinates used for survey activities. The SmartCheck algorithms not only deliver fast and accurate coordinates at up to 20 Hz, the algorithms ensure phenomenal reliability (99.99%) by continuously resolving ambiguities in the background and checking coordinates. With SmartTrack technology users can confidently rely on RTK solutions at distances up to 30 km and further from the base station. SmartCheck provides unprecedented confidence – you can rely on GPS1200.
