

Leica TPS1200

Quick Guide

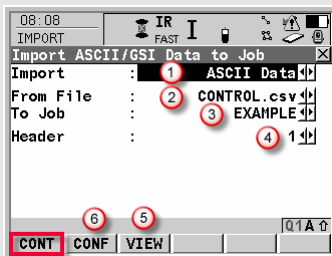

Import Points from an ASCII File

General steps to import points from an ASCII file to a job in the TPS1200

NOTE: Be sure that the instrument units are set to match the units of the points to be imported from the ASCII file before starting the import process.

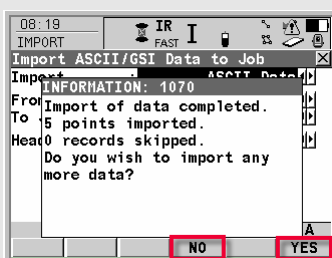

1. From the Main Menu, select **4 Convert ...**
Now select **2 Import ASCII/GSI Data to Job**.

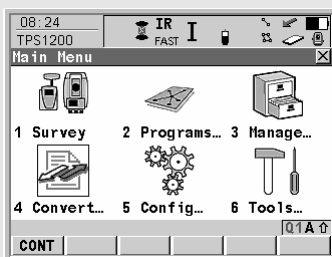

2. From the Import ASCII/GSI Data to Job menu:

- (1) Select the type of data to be imported.
- (2) Select the file from which the ASCII data is to be imported from the /DATA folder on the CF card.
- (3) Select an existing job, or create a new one.
- (4) Set the number of header lines in the input file, if any.
- (5) View the input file, if necessary.
- (6) Set the configuration of the points in the input file.

Finally, press **F1 CONT** to complete the import.

3. At the Information panel, either press **F6 YES** to import more points, or **F4 NO** to complete the import.

4. The process is now complete! The job that the points have been imported into is now the current job and you are ready to begin the desired surveying task.
